PUT SCIENCE AT THE CENTRE OF POLICY-MAKING

Ensuring a central role for evidence and expert advice in decision and policy-making is one of the greatest challenges currently facing the science community.

Professional Scientists Australia's advocacy is based on the need to respect the skills and expertise of scientists and other technical professionals and to take note of and respect peer-reviewed scientific research to create informed, evidence-based policy.

Respect and recognition of the work of scientists and the maintenance of community respect for STEM (science, technology, engineering and maths) expertise is vital in the face of post-truth world and 'alternative' facts.

Professional Scientists Australia is committed to being an effective voice for you as a scientist and to countering what can be formidably strong voices and/or vested interests who may misconstrue or misrepresent robust science.
