# ONE PLAN FOR SCIENCE

*We have had too many plans, too much change and too much politics. It's time to end the uncertainty so that science can deliver the jobs and innovation this country needs.*

## A NATIONAL PLAN FOR STEM SHOULD INCLUDE:

- properly funded science and R&D;
- putting science at the centre of policy and decision-making;
- a workforce development plan for STEM;
- professional development and skills training so scientists are equipped for the contemporary workforce; and
- a diverse and sustainable STEM workforce.

According to our latest Scientists survey, over 70% of respondents said Australia was not well-prepared to meet emerging challenges.

As a member of Professional Scientists Australia, you can be part of building and driving the plan that values scientists' work and recognises the importance of a properly-trained, highly-skilled STEM workforce in shaping the nation's future.
